

PUBLIC NOTICE

The Texas Commission on Environmental Quality (TCEQ) has notified the G&W FIELDSTORE (TX0930048) that the drinking water being supplied to customers had exceeded the Maximum Contaminant Level (MCL) for combined radium (-226 & -228). The U.S. Environmental Protection Agency (U.S. EPA) has established the MCL for combined radium (-226 & -228) to be 5 pico curies per liter (pCi/L) based on the running annual average (RAA) and has determined that it is a health concern at levels above the MCL. Analysis of drinking water in your community for combined radium (-226 & -228) indicates a compliance value in quarter three 2022 of 7 pCi/L for EP002. (13577 CR 446).

This is not an emergency. However, some people who drink water containing radium 226 and/or 228 in excess of the MCL over many years may have an increased risk of getting cancer.

You do not need to use an alternative water supply. However, if you have health concerns, you may want to consult your doctor to get more information about how this may affect you.

We are taking the following actions to address this issue:

We are continuing to blend the 13577 CR 446 well water with the 2851 CR 306 well water, flushing the storage tanks, flushing the dead ends of our water lines, and continuing consultation with our engineering firm.

If you have questions regarding this matter, you may contact:

Water System Official: James Engledow

The Texas Commission on Environmental Quality (TCEQ) has notified the G&W FIELDSTORE (TX0980043) that the drinking water being supplied to customers had exceeded the Maximum Contaminant Level (MCL) for gross alpha excluding radon and uranium. The U.S. Environmental Protection Agency (U.S.EPA) has established the MCL for gross alpha excluding radon and uranium to be 15 pico curies per liter (pCi/L) based on the running annual average (RAA) and has determined that is a health concern at levels above the MCL. Analysis of drinking water in your community for gross alpha excluding radon and uranium indicates a compliance value in quarter three 2022 of 21 pCi/L for EP002 (13577 CR 446).

This is not an emergency. Certain minerals are radioactive and may emit a form of radiation known as alpha radiation. Some people who drink water containing alpha emitters in excess of the MCL over many years may have an increased risk of getting cancer.

You do not need to use an alternative water supply. However, if you have any health concerns, you may want to consult your doctor to get more information about how this may affect you.
